[Portfolio](#)

As a software engineer with expertise in Laravel, PHP, APIs, and JavaScript, I am committed to designing and creating high-quality projects that exceed client expectations. Through my work as a self-motivated freelancer, and in corporations, I have demonstrated my ability to deliver custom web applications, services, integrations, and tools to businesses across diverse industries.

I am passionate about developing my expertise in new workplaces, with a particular focus on programming, web development, and management. I am highly adaptable and flexible, able to quickly adjust to changing environments and deliver results in diverse situations.

Work Experience

Senior Backend Developer

VUZ

Jan 2026-Present

Dubai, UAE

VAS Department

Payment Gateway Integrations & Subscription Lifecycle

- Integrated new DCB aggregators end-to-end (OTP and Header Enrichment flows).
- Maintained subscription state handling lifecycle states across daily cron jobs processing bulk status transitions.

API, Webhook/Callback Processing & System Design

- Built RESTful APIs using PHP 8.1 with Fat-Free Framework (F3), following MVC + Repository + Service + DTO architecture
- Migrated DCB providers from SOAP/XML to REST/JSON with OAuth 2.0 authentication, maintaining backward compatibility.
- Built and maintained asynchronous queue-based callback processing for multiple DCB providers and payment gateways.

DevOps & Infrastructure

- AWS services: Secrets Manager, S3, CloudWatch, ElastiCache Redis, CloudFront.
- Docker-based development environment.
- Cron job scheduling and monitoring across 20+ recurring jobs.

Team Lead - Software Engineer

Lexzur

Dec 2024-Jan 2026

Dubai, UAE

Application Development Department

- Led development of first-party integrations with the core product.
- Led the rewrite of a legacy Laravel-based marketplace from jQuery and outdated CSS to Livewire, Alpine.js, Tailwind CSS, and Vite, achieving a 45% overall performance improvement. Optimized LCP from 1.51s to 0.84s, reduced scripting time by 66%, rendering by 43%, and painting by 33%.
- Serve as the technical liaison in client meetings, gathering requirements and facilitating custom integrations.
- Design and own the development of new features while maintaining scalable and high-performance backend systems.
- Drive and uphold high engineering standards, perform code reviews, and ensure delivered code is compliant with the set standards.
- Participate in business requirements reviews and provide a technical assessment of complexity, risks, and impact on existing systems.
- Provide mentoring and coaching to engineers in the team, evaluate their technical progress, and help set development plans.
- Participate in team meetings, stand-ups, and architecture/design discussions.

Software Engineer

Lexzur
Jun 2023–Dec 2024

Built and maintained key features across multiple projects

- Marketplace: Implemented “Buy Now” and localization features, improved file organization, and introduced low-level MySQL optimizations.
- Messenger App: Developed full-featured messaging APIs, utilizing a multi-tenant architecture with a DB per tenant approach; implemented user-configurable garbage collection mechanisms.
- Integrations: Delivered custom integrations for multiple clients by actively participating in discovery and requirement sessions.

Designed and developed scalable APIs for the core app, including

- Migration of legacy CodeIgniter APIs to Laravel.
- Implementation of document note features with DB structure, notifications, and user interactions.

Full Stack Developer

Freelance Project
Feb 2023–Mar 2023

E-Commerce Sales Insights Retrieval Platform Beirut, Lebanon

- Implement a web application with a web-frontend and backend service.
- Create APIs for product purchase and products’ sales statistics.
- Developed frontend using React.js, Tailwind and backend using PHP, Laravel and MySQL.
- Utilized the repository design pattern for efficient database access and code organization.
- Make use of TDD to create the app and write some automated testing scenarios.
- Create documentation for the entire app.
- Containerize the solution in a Docker image and include instructions to run/deploy the container.

Full Stack Developer

OXO Guard Management System
Dec 2022–Apr 2023

Beirut, Lebanon

Paginate and add filter functionality

- Developed frontend using blades, tailwind, Datatables.js, select2.js, and Ajax.
- Refactor and improve code with reusability and readability.
- Implement new features utilizing complex search and filter.
- Applied web development fundamentals.

Refactor Backend Code

- Developed backend using PHP and Laravel.
- Implement Microservices and Repository architecture.
- Improve Queries being done on the Database.
- Refactor and improve controllers with reusability and readability.
- Implement new features.

Full Stack Developer

Freelance Project
Oct 2022–Dec 2022

Customer Onboarding and Verification System Beirut, Lebanon

- Create Microservice for Validation of Mobile Number using 3rd party API.
- Create APIs for customer integration.
- Developed frontend using React.js, Tailwind and backend using PHP, Laravel and PostgreSQL.
- Use TDD to create the app and write some automated testing scenarios.
- Create documentation for the entire app.
- Containerize the solution in a Docker image and include instructions to run/deploy the container.

Full Stack Developer

Freelance Project
Jan 2021–Mar 2022

Beirut, Lebanon

- Develop and improve the App using the .NET framework, C#, SQLite.
- Refactor and improve code with reusability and readability.
- Implement new features and maintaining existing codebases
- Implement Client/Server architecture.
- Oversee the installation and onboarding of the app.
- Research and develop new features.

Education and Certifications

- **MBA. Master's in Business Administration - 3.4 GPA** , Lebanon International University, Lebanon. **2021–2024**
- **B.Sc. Mechanical Engineering - 2.8 GPA**, Lebanon International University, Lebanon. **2013–2017**

Technologies and Languages

- Languages: PHP, JavaScript, C#, C++, Python, CSS, Html
- Technologies: Laravel, Blade, Livewire, Vite, jQuery, React.js, Tailwind CSS, Alpine.js, CodeIgniter, Bootstrap, Data tables, Select2, Git, GitLab, GitHub, Jira, SQL, SQLite, MySQL, MSSQL, Elasticsearch, Kibana, Postman, Ajax, Web Servers (Apache, tomcat).
- Other: Restful APIs, TDD, Repository design, Clean Code, Clean Architecture, Client/Server, Microservices architecture.

Courses & Training

- Hands-On training and workshop on open-Source Back-End Development Tools.
- Hands-On training and workshop on open-Source Front-End Development Tools.
- Cyber Security training Level -1 - POtech Consulting
- Windows DFIR Analyst - Group-IB
- Network Forensics Analyst - Group-IB

Skills and Qualifications

- Languages: Bilingual/Fluent in English and Arabic. Basic in Spanish, French and Italian.
- Technical/ Computer skills: AutoCAD, MS Office (Word, Access, Excel, PowerPoint), Adobe Audition.
- Excellent at researching, planning and development.
- Critical thinking.
- Creative Team Leadership.

Personal traits

- Possess high tendency to undertake new challenges.
- Fast learner.
- Ability to work independently, as well as on a team.
- Dynamic, creative, sincere, and reliable.
- Organized and able to handle multiple tasks at the same time.
- Committed to teamwork and professional ethics.
